It takes a lot of energy to be a student. And even more to power the things they need to succeed. Shell is helping tackle the world’s increasing energy needs by extracting previously unreachable natural gas, increased development of oil and gas sources and a commitment to producing renewable biofuels. But we can’t do it alone. Discover Shell’s current efforts, and how you can help generate future solutions by exploring challenging games, engaging mini-movies and more at www.shell.us/energizeyourfuture

LET’S GO.
