

Become a Future City Judge in your local area!

What is the Future City Competition?

40,000 students around the world in 6th, 7th, and 8th grades work in teams with an educator and STEM mentor to imagine, design, and build cities of the future. Along the way, they learn about engineering and city design, develop their writing and public speaking skills, and apply math and science to real world issues. This year's design challenge: *Powering Our Future!*

During the competition, student teams will:

1. Design and manage a city using SimCity software.
2. Research solutions to a city-wide challenge and write a City Essay.
3. Complete a project plan to organize their Future City project.
4. Use recycled materials to build a scale model with at least one moving part.
5. Present their city to a panel of technical judges.

We need Judges!

We provide assessment tools (called rubrics), electronic score sheets, and an instruction manual. You can choose to judge any of the following categories:

Virtual City Slideshows (approx. 4 hours, done from your home or office)

See how students use SimCity software to develop a city and progress it towards two goals of their own choosing. Find out what the teams learned from developing their city and how they're planning to apply that knowledge to the rest of their Future City project.

City Essay (approx. 4 hours, done from your home or office)

Would you like to see how young people imagine the future? Experience the ideas teams design as they take on this year's *Powering Our Future* challenge to engineer a resilient power grid that can withstand and quickly recover from the impacts of a natural disaster.

As a City Essay judge, you'll read several 1,500-word essays where students describe their city, outline their solutions, and describe how they work.

City Models and City Presentations (January 2019; See below for specific competition dates)

Are you looking for a chance to see tomorrow's leaders in action? As a Model & Presentation judge, you and your fellow judges will see six or seven teams present their city's unique features, learn how they came up with their ideas, and have a chance to ask questions.

To register, visit <http://www.futurecity.org/register!>

The following pages list each Future City Region in the USA, as well as the dates and locations of the competitions. Additional information can be obtained by reaching out to the Regional Coordinators at the contact emails below.

Competition details are subject to change. Be sure to [register as a judge](#) and check with your Regional Coordinator before attending an event.
